

Fraud Risk Assessment

Build your own human firewall

Test and educate your users

Many people experience that it is not the IT environment itself that is the greatest security risk in their organization, but rather the users in it. Systems and computers can be protected, assessed and monitored to ensure they are safe, but how safe are your users and how do you test them? Less than 1% of all organizations in Sweden measure how resilient their users are and thus they do not know what happens when exposed to, for example, phishing, spear phishing and ransomware attacks.

Simulate social engineering

Holm Security VMP contains an innovative and powerful tool to increase the resilience to social engineering. With this service, you can simulate attacks by e-mail and, to increase resilience, customized training is automatically presented to each user based on the specific user's behaviour. You will be given valuable statistics that provide the basis for further action.

The assessment is done without any risk to the user or your IT systems. The simulation uses e-mail messages and web pages. The service includes a variety of templates that you can easily edit, with the option to create your own e-mail messages and web pages. In this way, you can carry out more or less advanced social engineering and so-called spear phishing attacks targeted at your entire organization or a specific group of users within your organization.

GDPR compliance

How prone are your users to leaking personal data? With our Fraud Risk Assessment service you can measure how resilient users are to disclosing different types of personal data – an insight that is important in relation to GDPR.

Details

- ✓ Understand how resilient your users are against social engineering, through simulation of social engineering e-mails, like phishing, spear phishing and ransomware
- ✓ GDPR compliance – measure tendency to leak personal data and prevent leakage
- ✓ Sandbox technology – the assessment is carried out completely without any risk to the user and your IT systems
- ✓ Privacy by design – does not compromise personal integrity or store sensitive data
- ✓ Automated and customized awareness training based on specific user behaviour
- ✓ Recipient import function
- ✓ Grouping (tagging) of recipients
- ✓ A large number of ready-made and customizable templates
- ✓ Placeholders for e-mail address, first and last names and name of your organization
- ✓ Administration via Security Center

Statistics

- ✓ Opened e-mail messages
- ✓ Clicks on links
- ✓ Clicks on links in relation to opened e-mail messages
- ✓ Response rate via e-mail
- ✓ Response rate via e-mail in relation to opened e-mail messages
- ✓ Posted forms
- ✓ Posted forms in relation to opened e-mail messages
- ✓ Opened training messages

Automated training

Depending on the behaviour of each user in the simulation, customized training is automatically composed and presented to the user. The information in the training is very useful for the user and is based on ready-made templates in the form of text and illustrations. The sender and the templates can be changed freely and it is possible to refer to your own training material. With a few clicks, automation helps you to not only get invaluable statistics, but also to automatically train your users – simple and very powerful.

Statistics

The results of the assessment consist of statistics of opened e-mails, clicks, e-mail replies and posted forms. The statistics are not connected to users, but are completely anonymised. You can easily compare the results from assessments at different times to evaluate whether the actions you have taken between the assessments have given the desired effect.

Privacy by Design

This service is based on the privacy by design principle, which means that the user's personal integrity is never compromised. All users are anonymous in the assessment and no sensitive data is stored.

Market-leading vulnerability assessments

Holm Security is a challenger in automated and continuous vulnerability assessments.

Our Holm Security VMP platform offers the ability for everyone to effectively take control of the security of their networks and systems. But we also offer innovative solutions to assess how secure your users are. Our platform is easy to use and you get extensive support from our support staff and security experts. An investment in our platform is a smart and efficient investment in increased security – not least when faced with a future where cyber security is becoming increasingly important to meet an growing number of threats, new and existing laws and recommendations.
